

# How TeleHealth Can Augment Care

## TeleHealth in practice

TeleHealth fixes some of the problems families run into with access, but, there are still ways it could more effectively improve care. Before we can widely utilize TeleHealth, there are questions we need to answer.

### HOW TO FIND A TELEHEALTH SPECIALIST?

Will insurance networks provide this information?

Will consumers have to contact specialists directly?

### HOW ARE APPOINTMENTS COORDINATED?

Is it possible to make each of the models listed here one line? ie, department of public health school-based health services partnership for telehealth hospitals community service boards core service providers

### HOW ARE THEY STAFFED?

There is currently a shortage of particular specialists participating in TeleHealth. How can we increase this number to address specialized needs?

How do we ensure a licensed and fully trained practitioners on site to coordinate care?

### WHAT ARE THE COSTS?

Equipment needs can range widely, depending on the services offered—up to \$11K.

TeleHealth locations need a secure and high quality internet connection.

Providers also need a billing mechanism for direct and administrative services.

## HOW TELEHEALTH SHOULD WORK IF WE ADDRESS ALL THE QUESTIONS ABOVE:
